

FREE GUIDE

GOLDEN PACE

Know Your Numbers.

Keep Your Pace.

A simple daily health companion
for adults 55+

Written by William T Braddock Jr

Published by Little Red Apple Productions LLC

A wellness guide, not medical advice.
Check with your doctor before starting any exercise program.

Important notice — please read first

This guide is for general education and is not medical advice.

Golden Pace and this guide do not diagnose, treat, cure, or prevent any condition, and Golden Pace is not a medical device.

Talk to your primary care physician before you begin any exercise program, and before you change your diet, medication, or routine. If you feel chest pain, trouble breathing, faintness, or sudden weakness, stop and get medical help. In an emergency, call 911 (or your local emergency number).

Exercise involves a risk of injury. Readings and results in Golden Pace are only as accurate as the device you measure with and the numbers you enter. Never delay or ignore medical care because of something you read here or in the app.

Health information in this guide was checked against public guidance from the American Heart Association and the Centers for Disease Control and Prevention as of September 30, 2026.

Guidance changes, so check with your doctor for what applies to you. Mentioning these organizations does not mean they endorse this guide or Golden Pace.

Know Your Numbers, Keep Your Pace

The Golden Pace Guide for Adults 55+

WELCOME

Hello, and welcome to Golden Pace

A friendly walk through everything Golden Pace does, one topic at a time.

Golden Pace is a free daily health companion for adults 55 and older. It helps you keep track of your blood pressure, weight, medicines, sleep, water, meals, and gentle exercise, in about two minutes a day. It has big text, big buttons, and no account to create. Your records stay on your own phone.

Three promises

- **It is honest.** No made-up numbers, no fake scores, and no health promises. It is a logbook and a gentle coach.
- **It is quick.** Two minutes a day is enough to build a picture your doctor can use.
- **Your doctor is in charge.** Golden Pace helps you collect facts. Your doctor helps you understand them.

How to use this guide

Each chapter covers one part of the app and ends with a small **“Try it”** step, and takes about five minutes to read. You do not need to read in order. A green box is something to try. A gold box is a safety note worth reading twice.

What's inside

CHAPTER 1

Blood Pressure & Pulse

Numbers, not guesses.

Your doctor asks, “What has your blood pressure been?” This chapter makes sure you can answer with facts instead of a shrug.

What the numbers mean

Blood pressure is written as two numbers, like 120/80, and measured in millimeters of mercury (mmHg). The **top number** (systolic) is the pressure when your heart beats. The **bottom number** (diastolic) is the pressure between beats. Your **resting heart rate** is how many times your heart beats in one minute, written as beats per minute (BPM).

One reading is a snapshot, not a diagnosis. Blood pressure moves up and down during the day. What matters is the pattern over days and weeks, and that is exactly what a written log gives your doctor.

The categories

The American Heart Association (AHA) groups adult blood pressure readings like this (top number / bottom number):

Category	Top		Bottom
Normal	Less than 120	and	Less than 80
Elevated	120 to 129	and	Less than 80
Stage 1 high	130 to 139	or	80 to 89
Stage 2 high	140 or higher	or	90 or higher
Emergency range	Higher than 180	and/or	Higher than 120

Source: American Heart Association. These categories describe readings; only your doctor can tell you what yours mean and what your personal targets are.

If a reading is very high

If your reading is higher than 180 and/or higher than 120, the AHA advises waiting one minute and measuring again. If it is still that high **and** you have chest pain, shortness of breath, back pain, numbness, weakness, a change in vision, or difficulty speaking, **call 911**. If it is still that high but you feel no symptoms, contact your doctor right away. Golden Pace shows a warning whenever you enter a number in this range.

How to measure at home

These steps follow AHA guidance for home monitoring:

1. Avoid smoking, caffeine, and exercise for 30 minutes beforehand. Empty your bladder.
2. Sit quietly for at least five minutes. Do not talk or use your phone.
3. Rest your arm on a flat surface so the cuff is at heart level, with the cuff on bare skin just above the bend of your elbow.
4. Take two readings, one minute apart.
5. Measure at the same time every day, and write the numbers down.

Logging it in Golden Pace

1. Tap the **Log** tab.
2. Choose your **measurement timing**: morning before medicine, morning after medicine, afternoon, evening or bedtime, or after exercise (rest 30 minutes first).
3. Type your top number, bottom number, and resting heart rate. As you type, Golden Pace shows the category so you can see where the reading falls.
4. Tap **Save Entry**.

Because you pick a timing, your morning and evening readings for the same day are both kept. Golden Pace also checks that the top number is higher than the bottom number, which catches most typing slips.

TRY IT IN GOLDEN PACE

Take your first reading tomorrow morning using the five steps above and save it. Do it again in the evening. Two readings are the start of a pattern.

QUESTIONS FOR YOUR DOCTOR

- What blood pressure numbers should I aim for?
- How often should I check at home?
- Can I bring my monitor to my next visit to make sure it is accurate?

CHAPTER 2

Medications, Sleep & Weight

The small details that tell the story.

Blood pressure is only part of the picture. A few quick notes each day about your medicine, your sleep, your weight, and how your joints feel give your doctor context that numbers alone cannot.

The medication checklist

On the Log tab, two boxes let you check off **morning prescriptions** and **evening prescriptions**. It takes one tap, and it answers the question “Did I take it today?” before you start to wonder.

It also explains your readings. If you log a morning reading *before* your medicine and another *after*, your doctor can see the difference.

Talk to your doctor first.

Golden Pace is a memory aid, not a pharmacist. Never stop, skip, or change a dose because of anything you see in an app. Keep a current list of every medicine and supplement you take, and bring it (or the bottles) to every appointment.

Sleep

Pick the description that fits last night, from five stars (deep, restful sleep) down to one star (poor sleep, fatigued). You are not grading yourself. You are collecting evidence. If poor sleep shows up night after night, mention it to your doctor.

Body weight

Enter your weight in pounds or kilograms. To keep the numbers useful:

- Weigh at the same time of day, on the same scale, in similar clothing. First thing in the morning works well.
- Look at the **trend** on your chart, not one day's wiggle.
- If you notice a sudden change you cannot explain, mention it to your doctor's office.

Joint comfort and notes

After exercise, tag how your body felt: joints felt great, mild knee stiffness, shoulder tightness, lower back fatigue, or a

rest day. These tags also give simple hints, such as adjusting the bike seat or keeping weights light.

The **Notes** box is for anything you want to remember to tell your doctor: dizziness when you stand up, a new side effect, a question that popped into your head at 2 a.m. Write it down and it will be there at your appointment.

TRY IT IN GOLDEN PACE

Tonight, open the Log tab and fill in just three things: your evening medicine box, a sleep rating in the morning, and one note. Ninety seconds.

Your Daily Routine

Gentle, guided exercise you can do in a chair.

The **Today** tab gives you one gentle 15-minute routine every day, guided step by step, so you never have to wonder what to do.

Talk to your doctor first.

Check with your primary care physician before you start **any** exercise program, including the routines in Golden Pace. This matters most if you have a heart condition, blood pressure concerns, diabetes, dizziness, joint or balance problems, take medication, or have not been active lately. Stop and get medical help if you feel chest pain, trouble breathing, faintness, or sudden weakness. In an emergency, call 911.

Your week at a glance

Day	Routine
Monday	Chair Tai Chi & Breath Foundation
Tuesday	Gentle Stationary Bike Spin
Wednesday	Seated Dumbbell Strength
Thursday	Chair Tai Chi Spine Mobility
Friday	Light Cardio Bike & Flush
Saturday	Gentle Flexibility & Shoulders
Sunday	Rest & Guided Breathing

Each routine is about 15 minutes at a gentle effort (2 out of 5) and needs only a sturdy chair, plus a stationary bike or light dumbbells on those days. You can switch to a different day's routine any time.

The guided player

Every routine is broken into short steps. For each step you get a clear picture, a plain description, a **coach tip**, and a built-in timer (for example, two minutes of seated breathing). Tap **Start Timer**, follow along, then tap **Mark this step completed** and move to the next. If you need a break, tap Previous and Next as you like.

The 70 percent rule

The coach tips repeat one idea: **never force a movement.** Stay well within about 70 percent of your comfortable range. Gentle and regular beats hard and occasional.

What the experts recommend

The Centers for Disease Control and Prevention (CDC) recommends that adults 65 and older aim for 150 minutes of moderate aerobic activity a week, muscle-strengthening activity on at least two days a week, and regular balance activities. The CDC also notes that some activity is better than none, and that people with chronic conditions should be as active as their abilities and conditions allow.

Golden Pace's routines are a gentle starting point, not a prescription. Your doctor or a physical therapist can tell you how much is right for you and how to build up safely.

TRY IT IN GOLDEN PACE

After your doctor says it is fine, open the Today tab and do just the first step of today's routine. That is a win. Add the next step tomorrow if it feels good.

QUESTIONS FOR YOUR DOCTOR

- Is chair-based exercise a good starting point for me?
- Are there movements I should avoid because of my heart, joints, or medications?
- How many minutes a week should I build toward?

CHAPTER 4

The Movement & Safety Guide

Form tips and gentle rules for home practice.

Good form keeps you safe and makes gentle exercise more effective. The **Library** tab in Golden Pace holds a short guide for each kind of movement.

Chair Tai Chi

Tai chi is slow, flowing movement paired with steady breathing. Two favorites in the guide:

- **Cloud Hands (seated).** Sit upright, away from the backrest. Softly float both hands in front of your chest as if tracing circular clouds. Rotate gently from the torso, not just the wrists.
- **Parting the Wild Horse's Mane.** Hold a soft imaginary circle in front of your chest. Slowly glide one hand forward and outward at shoulder height while pressing the other hand down. Stay within 70 percent of your maximum stretch.

Stationary bike

- **Seat height.** With the pedal at its lowest point, your knee should have a slight bend (about 25 to 30 degrees), never locked straight.
- **The talk test.** You should be able to say a full sentence out loud while pedaling. If you are too breathless to talk, ease off the resistance.

Seated dumbbells

For a **bicep curl**, keep your elbows gently near your ribs. For a **scapular row**, hinge forward slightly at the hips with a flat back and pinch your shoulder blades together at the top. Aim for 10 to 12 smooth, controlled repetitions. Slow is better than heavy. If your shoulders feel tight, keep the weights light, and ask your doctor or a physical therapist which weight is right for you.

Ten simple safety rules

1. Use a sturdy chair with no wheels, placed on a non-slip floor or against a wall.
2. Wear supportive, non-slip shoes.
3. Keep water within reach.
4. Breathe steadily. Do not hold your breath.
5. Move slowly and smoothly. No bouncing or jerking.

6. Never push into pain. Mild effort is fine; sharp joint pain is a signal to stop.
7. Pass the talk test: you can say a full sentence.
8. Stand up slowly after sitting for a while.
9. Skip the routine on days you feel unwell, and log a rest day instead.
10. Tell someone in the house when you are exercising, especially when you are new to it.

Stop right away and get medical help if you feel:

chest pain or pressure, trouble breathing, dizziness or lightheadedness, faintness, or sudden weakness. In an emergency, call 911.

TRY IT IN GOLDEN PACE

Open the **Library** tab and read the section for the routine you will do this week. Two minutes of reading now saves you from guessing later.

Hydration

Small sips, steady habit.

Water is the easiest healthy habit to forget. The Hydration Pacer on the **Meals** tab turns it into a simple game of tapping glasses.

How it works

Golden Pace starts you with a goal of **8 cups (64 ounces)** a day. Each time you finish a glass, tap one of the glass icons to mark it. You can also record what you drank: pure water, herbal tea, low-sodium broth, or decaf coffee.

When all eight glasses are marked, your daily hydration task is complete and you can earn the **Hydration Hero** badge. Your hydration also appears as a chart on the Reports tab, so you can see your week at a glance.

Talk to your doctor first.

Eight cups is a common starting goal, not a rule for everyone. If your doctor has told you to limit fluids, for example because of a heart or kidney condition, follow your doctor's advice and ignore the 8-cup goal.

Tips that make it stick

- **Pair it with something you already do.** One glass with each medicine time, one after each routine, one with each meal.
- **Sip, do not chug.** A glass every couple of hours is easier than catching up at night.
- **Keep a full glass in sight.** For some people thirst is less noticeable with age, so a visible glass is a good reminder.
- **Choose low-sodium broth.** Regular broth can be very salty, which is why Golden Pace lists the low-sodium kind.
- **Slow down before bed** if getting up at night bothers you. Front-load your glasses earlier in the day.

TRY IT IN GOLDEN PACE

Tomorrow, tap a glass every time you finish one. Do not worry about reaching eight. Just see how many you actually drink. That is your honest starting number.

QUESTIONS FOR YOUR DOCTOR

- How much fluid is right for me each day?
- Do any of my medicines affect how much I should drink?

CHAPTER 6

Meals & the Photo Analyzer

Eat well without keeping a spreadsheet.

The Meals section lets you record what you eat in a few taps. An optional tool can even look at a photo and estimate the nutrition. Here is how to use it well, and what it can and cannot do.

Logging a meal

1. Tap the **Meals** tab.
2. Choose the occasion: breakfast, lunch, dinner, or snack and beverage. Set the time.
3. Take a photo, describe the meal in words, or do both.
4. Tap the **Analyze Meal** button if you want an estimate.

Golden Pace shrinks photos on your phone before saving them, so they take up less space. The photo analyzer is optional and uses your own free Google AI key, which you enter in the menu under **Gemini AI API Key Settings**. Without a key, you can still log every meal by hand.

The AI analyzer, honestly explained

The analyzer uses artificial intelligence (AI), specifically Google's Gemini service, to estimate what is on your plate.

Four things to know:

- **It needs your own Google AI key.** Golden Pace does not include one. You create a key with Google, paste it into **Gemini AI API Key Settings** in the menu, and it stays on your device.
- **It is an estimate, not a measurement.** It can be wrong. Use it to notice patterns, not to count every milligram.
- **It needs the internet.** If it cannot run, Golden Pace saves your meal marked "Not analyzed." It never makes up numbers.
- **It shares that meal with Google.** The photo or description you analyze is sent to Google's Gemini service to produce the estimate. If you prefer to keep meals private, simply do not use the analyzer. Everything else in the app keeps your records on your own phone.

Salt (sodium) and your blood pressure

The AHA recommends no more than 2,300 milligrams (mg) of sodium a day, and an ideal limit of no more than 1,500 mg a day for most adults. Most of the sodium Americans eat comes from packaged, prepared, and restaurant food rather than the salt shaker, so reading labels helps.

Three label habits:

- 1. Check the **serving size** first. If you eat two servings, double the sodium.
- 2. Read the **sodium** line in milligrams.
- 3. Scan the ingredients for “salt,” “sodium,” and words like “soda” or “MSG.”

Label says	It means
Sodium-free	Less than 5 mg per serving
Very low sodium	35 mg or less per serving
Low sodium	140 mg or less per serving
Reduced sodium	At least 25% less than the regular version

Source: American Heart Association.

When you use the analyzer on a heart-healthy, low-sodium meal, you can unlock the **Mindful Plate** badge.

TRY IT IN GOLDEN PACE

Log tomorrow’s breakfast with a photo. Then look at the sodium line on the label of one packaged food in your kitchen. Just look. Knowing is the first step.

QUESTIONS FOR YOUR DOCTOR

- What daily sodium limit is right for me?
- Are there foods I should avoid because of my medicines?

Milestones: Chair Stand & Balance

Two quick checks you can repeat and compare with yourself.

Strong legs and steady balance help you stay independent. The **Milestones** tab has two short checks so you can watch your own progress over time.

Talk to your doctor first.

Only try these checks if your doctor has cleared you. If you have had falls, dizziness, or balance or joint problems, ask first. Do the tests with a sturdy chair against a wall on a non-slip floor, and have someone nearby the first few times. Stop if you feel dizzy, short of breath, or in pain.

The 30-Second Chair Stand

This test comes from the CDC's fall-prevention toolkit, called STEADI (Stopping Elderly Accidents, Deaths and Injuries). It

measures leg strength and endurance.

1. Use a straight-backed chair without arms. Sit in the middle of it with your feet flat on the floor.
2. Cross your arms over your chest, hands on opposite shoulders. Keep your back straight.
3. Tap **Start 30s Test**. Stand all the way up, then sit all the way down, again and again for 30 seconds.
4. Tap the + button for each full stand. (In the official test, a stand counts if you are more than halfway up when time runs out.)
5. Tap **Save Reps** to keep your result.

If you have to push with your arms to get up, stop. That is a sign to talk with your doctor, and the official test scores it as zero.

The Single-Leg Balance check

1. Stand next to the back of your chair, fingertips resting near it for safety.
2. Lift one foot about 2 inches off the floor.
3. Tap **Start Balance Stopwatch**. Stop it when your foot touches down.
4. Save the time for your **left** leg, then repeat on your **right**.

Reading your results

Scores vary a great deal by age and sex, and Golden Pace shows a reference range for just one age group. Do not worry about matching a chart. **Compare yourself with yourself:** test the same way, in the same chair, at the same time of day, about once a month. Your doctor or physical therapist can tell you what your numbers mean. Your history is saved in the Milestone Test History list.

TRY IT IN GOLDEN PACE

If your doctor says it is fine, do one round of each check this week and save the results. That is your baseline. Set a reminder for four weeks from now.

QUESTIONS FOR YOUR DOCTOR

- Is it safe for me to do the chair stand and balance checks at home?
- What would a good goal be for someone my age?

CHAPTER 8

Reports, Charts & the Doctor Sheet

Turn your daily notes into a clear picture.

After a week or two of logging, the **Reports** tab begins to tell a story. It is also the tab you will use to prepare for a doctor visit.

Your seven-day summary

At the top you will see four quick cards: **active sessions** this week, your **average blood pressure**, your **resting pulse**, and your **daily hydration average**. If you have not logged a reading yet, the cards show a dash instead of inventing a number.

Four charts

- **Blood pressure trend.** Top and bottom numbers over time.
- **Body weight.** Your trend, without the daily noise.
- **Exercise minutes.** How often, and how long.
- **Hydration.** Cups of water or tea per day.

Below the charts is the **Daily History Log**, a scrollable list of every entry, laid out the way a doctor likes to read it.

Share it with your doctor

Two buttons at the bottom of the Reports tab help you bring your numbers to an appointment:

- **Export CSV Health Log.** This saves everything as a spreadsheet file in comma-separated values (CSV) format. It opens in Excel, Google Sheets, Apple Numbers, and most other spreadsheet apps.
- **Print Doctor Consultation Sheet.** This makes a clean, printable summary you can hand over at the visit.

Getting ready for your appointment

1. A few days before, open the Reports tab and look at your charts.
2. Circle anything that surprised you: a high reading, a bad week of sleep, a day with dizziness.
3. Print the Doctor Consultation Sheet, or have the file ready to show on your phone.
4. Write your top three questions in the Notes box or on paper.
5. Bring your blood pressure monitor if your doctor wants to check its accuracy.

Then let your doctor do the interpreting. Your job is to bring the facts. Their job is to tell you what they mean.

When you share an exported file or a printout, remember it contains your health information. Share it only with people you trust.

TRY IT IN GOLDEN PACE

At the end of your first week, open Reports, look at your charts, and print or export the sheet just to see what it looks like. When your appointment comes, you will be ready.

CHAPTER 9

The Daily Quest: Points, Ranks & Badges

Small wins that add up.

Healthy habits are easier when they feel rewarding. The **Quest** tab turns your daily tasks into a friendly checklist, with points, ranks, and badges along the way.

Seven daily quests

Quest	Points
Morning blood pressure & pulse	30
Morning medications	20
15-minute Tai Chi, bike, or dumbbells	50
Drink 8 cups of water	30
Log a healthy meal with AI	40
Evening blood pressure or calming wind-down	30
Evening medications check	20

Tap any quest to jump to the right tab. Complete all seven and you unlock the daily reward chest, worth 50 bonus points. You do not have to finish everything every day. Some days will be a rest day, and that counts too.

Five ranks

Rank	Points needed
 Gentle Seedling	0
 Flowing Bamboo	150
 Mountain Oak	400
 Golden Crane	800
 Tai Chi Master	1,400

Six badges to collect

-  **Morning Bird.** Log your morning blood pressure and vitals before 9:00 a.m.
-  **Iron Willow.** Complete five Chair Tai Chi or Seated Dumbbell sessions.
-  **Hydration Hero.** Reach the full 8 cups of water in one day.
-  **Cardio Captain.** Log 15 or more minutes on the stationary bike.

-  **Doctor's Champion.** Keep a 7-day vitals and medication streak.
-  **Mindful Plate.** Analyze a heart-healthy, low-sodium meal.

Fair play, by design

Points reward **showing up**, not any particular reading. A high blood pressure number earns the same points as a normal one, because honesty is the whole point. Rewards can be earned once a day, so ticking a box twice does not double it, and your streak only grows on days with real activity.

Do not chase points at the expense of rest. A rest day is part of a healthy week.

TRY IT IN GOLDEN PACE

Open the Quest tab tomorrow morning and aim for just two quests: your blood pressure and one glass of water. Then see how the day goes.

CHAPTER 10

Gentle Alarms

Reminders that do not jangle your nerves.

The best routine is the one you remember. Golden Pace can play a soft chime to remind you of your morning vitals, your movement, or your next glass of water.

Setting one up

1. Tap the **bell button** at the top of the screen to open **Daily Gentle Alarms**.
2. Add a reminder: give it a name (for example, “Morning blood pressure”), pick a time, and choose a chime. Use the chime test to hear it first.
3. Switch each reminder on or off as your schedule changes.

Good times to consider: a few minutes before your usual medicine time, after breakfast for your routine, mid-afternoon for a glass of water, and early evening for your second reading.

An important limit

A web app can only ring while it is open on your screen. That means Golden Pace's chimes work when the app is open, but they will **not** wake a locked phone or sound if the app is closed.

Talk to your doctor first.

For anything that truly matters, such as medicine times, also set an alarm in your phone's built-in Clock or Reminders app. Use Golden Pace's chimes as a gentle extra, not your only safety net.

Keeping the app open on a nearby tablet or charging phone during the day is one simple way to get more use from the chimes.

TRY IT IN GOLDEN PACE

Set two reminders today: one for your morning reading, one for your evening reading. Then add the same two times to your phone's own alarms.

CHAPTER 11

Profiles, Locks & Your Privacy

Your records belong to you.

Golden Pace was built around one idea: your health information is nobody's business but yours. Here is how it keeps your records private, and how to keep them safe.

One phone, many people

There is no sign-up and no account. When you open the app you pick a profile, or add one with a name and a picture. Each profile has its own completely separate records, so two people can share a phone without ever seeing each other's numbers. Use **Profile, PIN & Lock** in the menu to switch or lock.

The optional PIN

A personal identification number (PIN) is four to six digits. You can add, change, or remove it at any time in Profile, PIN & Lock.

- After five wrong tries, Golden Pace slows down further attempts.
- A PIN-protected profile locks itself after five minutes of inactivity.
- If you forget your PIN, you can start over with a new profile and restore a backup file into it. (This is why backups matter, below.)

An honest note: the PIN is a privacy screen that keeps casual snoopers out. It is not the same as encrypting your data. Keep your phone's own lock screen on, too.

Where your data lives

Your records are stored on **your own device**, inside your browser's storage, not on Golden Pace's servers. Your health records are never sold, because they never leave your device. The only thing we ever ask for is your email address, and only if you request this free guide. The one exception is the optional meal analyzer from Chapter 6, which sends the meal you choose to Google's Gemini service.

Back up your Health Vault

Because your data lives on your device, clearing your browser data, using a private browsing window, or losing the phone can erase it. A backup file is your insurance:

1. Open the menu and choose **Persistent Vault**, the backup option.
2. Tap **Download Health Vault**. This saves your history, badges, and points into a single file on your device.
3. To restore, open the Vault and choose your backup file. Restoring is all or nothing, so a damaged file will not scramble your existing records.

Back up about once a month, and after any important stretch of readings. Store the file somewhere safe, because it contains your health information.

Read the full details in Golden Pace's Privacy Policy and Terms of Use, linked at the bottom of the app.

TRY IT IN GOLDEN PACE

Add a profile if you share your phone, and download your first backup today, even if you only have a few entries. Then set a monthly reminder for your next one.

Install, Offline & Getting Started

Put it on your home screen and start today.

Golden Pace runs in your phone's web browser, so there is no app store and nothing to download. You can also add it to your home screen so it opens like any other app.

Add it to your home screen

Tip: start from the app itself, not a page about it, so the icon opens the app.

iPhone or iPad (use Safari):

1. Open Golden Pace in Safari.
2. Tap the **Share** button (the square with an arrow).
3. Tap **Add to Home Screen**, then **Add**.

Android (use Chrome):

1. Open Golden Pace in Chrome.
2. Tap the **three-dot menu**.
3. Tap **Install app** (or **Add to Home screen**).

It works offline

After your first visit, Golden Pace saves itself on your device and opens with no internet at all. You can log readings, tick quests, use the timers, and view your charts on an airplane or in a dead zone. Two things need a connection: the very first visit, and the optional meal analyzer. Updates arrive automatically the next time you are online.

Protecting your records

- **Do not use a private or incognito window.** It forgets everything when you close it.
- **Install it and back up.** On an iPhone, Safari can clear a website's saved data if you have not visited in about a week. A home-screen app and a monthly backup (Chapter 11) protect you.
- **Keep your phone's software up to date.**

Questions? The **Help & FAQ** page, linked at the bottom of the app, has quick answers.

TRY IT IN GOLDEN PACE

Install Golden Pace on your home screen right now, then turn on airplane mode and open it. Seeing it work with no internet is a small moment of confidence.

PUT IT INTO PRACTICE

Your First Seven Days

A gentle plan. Skip anything your doctor tells you to skip.

Day	Do this	Time
1	Add Golden Pace to your home screen. Create your profile. Read the safety notice.	10 min
2	Take a morning blood pressure reading with the five steps. Save it in the Log tab.	5 min
3	Add your evening reading, your sleep rating, and a note. Tap a glass each time you drink.	5 min
4	With your doctor's okay, try the first step of today's routine on the Today tab.	5 min
5	Set your gentle alarms, and add the same times to your phone's alarms.	5 min
6	Log one meal with a photo. Look at a food label's sodium line.	5 min
7	Open Reports and look at your first charts. Download your first backup. Write down your questions for the doctor.	10 min

That is one week. If you missed a day, that is fine. Just log today. No hurry, no worry.

Questions to Ask Your Doctor

Tick the ones that matter to you.

- ☐ What blood pressure numbers should I aim for?
- ☐ How often should I check my blood pressure at home, and at what times?
- ☐ Can we check that my home monitor is accurate?
- ☐ Are my medicines the right ones and the right timing? Are there side effects I should watch for?
- ☐ Is it safe for me to start a gentle exercise program? Which movements should I avoid?
- ☐ How many minutes a week should I build toward?
- ☐ Is it safe for me to try a chair-stand and balance check at home?
- ☐ How much fluid should I drink each day?
- ☐ What daily sodium (salt) limit is right for me?
- ☐ What symptoms mean I should call your office, and what means I should call 911?
- ☐ When should I come back, and what should I bring?

Print this page or show it on your phone. Bring your Doctor Consultation Sheet from the Reports tab too.

Glossary

AHA

American Heart Association, a health organization that publishes blood pressure and heart health guidance.

AI

Artificial intelligence. In Golden Pace, the optional meal analyzer uses it to estimate nutrition.

BPM

Beats per minute, the unit for your heart rate.

CDC

Centers for Disease Control and Prevention, the U.S. public health agency.

CSV

Comma-separated values, a simple spreadsheet file.

Diastolic

The bottom blood pressure number, the pressure between heartbeats.

mg

Milligram, a very small unit of weight used for sodium on food labels.

mmHg

Millimeters of mercury, the unit for blood pressure.

PIN

Personal identification number, the optional four to six digit code that locks your profile.

Sodium

The part of salt that can raise blood pressure in some people.

STEADI

Stopping Elderly Accidents, Deaths and Injuries, the CDC's fall-prevention toolkit.

Systolic

The top blood pressure number, the pressure when your heart beats.

Vault

Your saved records, and the backup file you can download.

WHERE THE FACTS COME FROM

Sources

Health facts in this guide come from these public pages, all read on September 30, 2026:
